## READING

### Q1-A: Read the text and answer the following questions:

Crude oil is currently the most important source of energy in the world .It is a fossil fuel which is formed over many years by the decomposition of organic compounds, or anything that contains the element Carbon. These organic materials come from the remains of animals and plants .When sediment and other organic materials are buried deep under the ground under high temperature and pressure, crude oil is formed. It then undergoes many different processes before it is ready to be used as energy, and from it we get petrol, diesel and kerosene, among other fuels. However, due to the time taken to form new supplies of crude oil, it is considered to be a finite, non-renewable source of energy.

1- According to the text; there are many things we can get from crude oil. Mention two of them.

.....

2- Write down the sentence which indicates that crude oil isn't a renewable energy.

.....

3- Find a word in the second paragraph which means "limited in size or supply".

.....

4- What does the underlined pronoun "it", in the second paragraph, refer to?

.....

How did fossil fuel be formed?

.....

5- Do you think that fossil fuels won't exist in the future? Explain.

.....
